

MEME INTEL

MEME COIN INTELLIGENCE

DISCOVERY, INTELLIGENCE, VERIFICATION

MEMECOIN QUICK START

1. Get set up.

Set up. Practice small. Check your calls.

A Create your GMGN login.

Open gmgn.ai > **Connect** > **Connect Telegram**. Follow the login prompts. Make a Telegram account first if needed.

B Create a Phantom wallet.

Install from phantom.com/download. Choose **Create a New Wallet** and follow setup. Keep your recovery phrase offline. Never share it.

C Add a small amount of SOL.

Use the **Solana network**. Fund Phantom, then send a small test to your GMGN Solana deposit address. These are separate wallets; confirm arrival first.

START SMALL

Choose one learning budget you can afford to lose. Keep some SOL for fees. Memecoins can go to zero.

Use Phantom for this Solana guide. Rabby is an optional wallet for Ethereum-compatible networks.

[GMGN setup](#) / [Phantom download](#)

PRACTICE / STEP 2

Follow one small call.

Start with \$1-\$10 per trade. Fees are extra.

A Join the right Telegram channel.

Open [@mad_apes_gambles](#) and tap **Join**. Find an original Solana token post, not a later "5x" update.

B Copy the contract address.

The **CA** is the token's unique address. Paste it into GMGN search. Match the full address and the Solana network.

C Check, then buy small.

Look at the chart, warnings and trading liquidity. If the token has already jumped or anything is unclear, skip it. Check the amount and fees before buying.

D Know how you will get out.

Decide when to sell before buying. Use **Sell** in GMGN when you exit, then confirm it completed. Keep SOL available for the selling fee.

COPY THE IDEA, MAKE YOUR OWN DECISION

This is manual practice. You choose whether to buy and when to sell. A Telegram post does not guarantee a good trade.

Too expensive to trade \$1-\$10 after fees? Watch the call instead. Do not increase your budget just to make it work.

TRACK / STEP 3

Let Phanes track your calls.

A call is a token you post. P&L means profit and loss.

A Create a private Telegram group.

Choose **New Group** and name it "My Calls". Phanes works in **groups, not channels**. A separate channel is optional for sharing result cards.

B Add the official Phanes bot.

Use phanes.bot/links. Add **@phanes_bot** to My Calls. Give it admin rights with **Delete Messages**; allow **Embed Links** in group permissions.

Before your first call: Phanes recommends a supergroup. Its setup guide explains switching an empty group public, then private. Check with **/id**.

C Post each bought CA promptly.

Paste the full address as yourself and wait for the bot's reply. Tracking starts at the first post in your group, not at an earlier MadApes call. Keep losing calls too.

Type in your group	What it does
/pnl YOUR_CA	Creates the token's P&L card.
/calls me	Shows your recent calls and current results.
/lb me	Shows your overall call statistics.

Replace **YOUR_CA** with the real contract address. No journal needed. Phanes does not need your recovery phrase or money.

[Phanes setup](#) / [Phanes commands](#)

READ / STEP 4

A successful call: 14.2x.

Here is the example supplied for this course.

On the card

Plain English

Called at 154.9K

Starting market cap: about \$154,900.

14.2x

The reported peak was 14.2 times the starting value.

2h, 39m

Time since the call when this card was made.

Market cap is price multiplied by token supply. It is not the money available to withdraw.

Check the current result too. This card shows the peak after the call. Price may have fallen since. It does not prove someone sold at the peak.

How Phanes measures a call

LEARN / STEP 5

Your entry changes the result.

Two people can buy the same token and get different outcomes.

A \$5 practice trade	Earlier entry	Later entry
Buy at market cap	\$100K	\$250K
Sell at market cap	\$200K	\$200K
Value before costs	\$10	\$4
Gain / loss	+\$5	-\$1

Same token. Same exit. **The later buyer paid more.**

This simple example assumes unchanged supply and ignores fees and trading costs.

COMPARE ONE STRONG CALL WITH ONE WEAK CALL

1 Was the entry already late?

Look at the starting market cap and how far price had risen.

2 Did buying continue?

Check the chart and trading activity after the call.

3 Did it hold its gains?

Compare the peak card with the current result. Study weak calls too.

NEXT: COULD YOU FIND IT EARLIER?

Next in Meme Intel: spotting tokens **before a MadApes call**. Learn earlier discovery and careful checks. Earlier does not guarantee profit.
